

INSTANT SHELTERS

A STEP BY STEP GUIDE TO
ERECTING A COMPACT SHELTER

SHELTER GUIDE

Things You Should Know

- ↑ Where possible, two people should erect the shelter.
- ↑ Do not fully extend the frame until the canopy is attached. The further the frame is pulled out, the higher the centre post goes, making it difficult to pull the canopy over the structure.
- ↑ We recommend for first time use that the moving joints are lubricated with WD40 or a silicone spray.

1

Open and remove the frame from the box.

2

With two people standing at opposite sides of the frame, hold a leg in each hand. Carefully lift the frame slightly off the ground whilst moving backwards to extend the frame outwards until the legs are an arms width apart.

3

Extend the centre pole out until it self locates and clicks into place.

4

Remove the canopy from the box, unfold it and locate the corners.

SHELTER GUIDE

5

Carefully pull the canopy over the top of the frame and ensure all corners are placed in position. Screw in corner baubles through the corner hoops of the canopy and into the hole on the top of the legs to secure canopy.

6

Drop the inside leg by pulling the second leg to bottom pull pin and pull the inner leg down to your desired height setting.

7

Take hold of the cross bars and walk the frame out as far as possible.

8

To extend the shelter upwards, person 1 stands at one of the corner legs, with person 2 holding the nearest centre post underneath the shelter.

9

Person 1 at the corner leg needs to push the sliding joint up. At the same time person 2 needs to push the centre post up until it clicks into position. This will extend the framework upwards even further. The pin should locate in to the hole at the top of the leg. Once this clicks in to place repeat with the remaining legs and push the sliding joint into place.

10

Once the shelter is fully extended, you can push the leg upwards to increase the height. To do this, pull the red ring at the bottom of the leg and the inner leg will slide out. Next pull the inner leg down and it will automatically locate in to the first height setting. There are five different height settings on the leg.

ATTACHING SIDES

- Firstly, find the side of the sidewall with the long strip of velcro and align it to the long piece of velcro on the inside of the canopy at the bottom of the valance.
- Move along the wall attaching the velcro in small increments making sure it is tight.

- Once the velcro across the top is attached, wrap the straps around the frame leg.
- Zip the next wall to the shelter and continue to attach the velcro.

Things You Should Know

- The sidewalls are designed to be a tight fit, this ensures they look neat and professional, if you struggle to join the last side, use the additional joining strip we provide with all sides. We recommend using this for the first few uses of the shelter, until the material stretches slightly.
- If more than one piece is required, it means that the sidewalls aren't being pulled tight enough.

COMPACT SPARES

SPARES TO BE
ADDED WHEN PASSED!

ACCESSORIES

Anchor Kit

Comprising of a 360mm long metal stake and a webbing anchor strap. This is designed to safely strap around the frame.

Firstly, clip the strap around the inside top corner joint. Run this down the inside of the corner leg. Place a large metal stake through the loop and pull tight to secure into the ground.

Canopy Protector Bag

Included with all of our instant shelters is a canopy protector cover. This drawstring bag goes over the canopy when the frame is packed down, prior to putting the shelter in the bag. It assists in the protection of your canopy and stops it from getting marked by the frame bag.
